EDUCATION

Rensselaer Polytechnic Institute - GPA: 3.93

Troy, NY

Dual, Bachelor of Science in Computer Science and Information Technology and Web Sciences

Expected Graduation: May 2026

Minor in Chinese

Coursework: Data Structures, Computer Organization, Algorithms, Database Systems, Operating Systems, Web Development, Programming Languages, Managing IT Resources

EXPERIENCE

Data Analyst

September 2024 - December 2024

Johnson & Johnson

- Standardized process parameter data across 18 Johnson & Johnson manufacturing sites using a centralized database, enhancing global Good Manufacturing Practices (GMP) compliance and Product Quality Review (PQR) analytics.
- Conducted trend analysis on data, identifying key reporting gaps and discrepancies, and developed interactive dashboards in Excel and Looker Studio to provide actionable insights, saving over \$4,000 in reporting costs.
- Coordinated with Johnson & Johnson's manufacturing sites and stakeholders to collect, validate, and analyze data, resulting in optimized reporting timelines and driving consistency in manufacturing processes.

Software Engineer Intern

May 2024 - August 2024

Lockheed Martin, Rotary and Mission Systems

- Collaborated closely with team members to assist in the development and maintenance of the MK41 Vertical Launching Systems (VLS).
- Refactored the customer-facing VLS interface using Java Swing on the NetBeans IDE, streamlining code and delivering two major updates that improved functionality and user accessibility leading to 10x faster response times.
- Optimized the power aperture and designed tracking algorithms for a search radar system using Python, MATLAB, and Excel, achieving a 99% prediction accuracy when tracking hypersonic threats.

PROJECTS

CARPI | Python, React

January 2023 - October 2024

- Developed CARPI Bot, an innovative Discord bot project, in collaboration with an open-source team through an Agile development environment, to elevate academic support and student engagement within the university community.
- Designed and implemented features such as fast text-based calculators, moderation shortcuts, and real-time access to the university's academic calendar, seamlessly integrated within the Discord platform.

AIpaca | React-Native, Python

October 2024

- Collaborated in a hackathon team to create a mobile app inspired by the idea of democratizing wildlife data collection, aiming to engage more people in sourcing ecological data for research through easy-to-use mobile technologies.
- Developed the AI-paca app React Native for iOS to capture animal sightings, classify species with a deep learning model, and store data via a Python API and Supabase for environmental research.

Lucid | Python, Tensorflow

June 2023 - August 2023

- Implemented a model to enhance image resolution using the Enhanced Super-Resolution Generative Adversarial Network (ESRGAN) architecture, specifically trained on drawings and digital art to upscale the artwork by up to 3x its original size.
- Integrated TensorFlow and OpenCV libraries into the model architecture, optimizing performance and enhancing the quality of output images.

ACTIVITIES AND LEADERSHIP

HackRPI Organizing Team | Director of Marketing

November 2022 - Present

- Lead the team in creating promotional strategies across social media, flyers, and digital platforms to drive hackathon engagement.
- Attracted over 1000 hackers nationwide and from the NY Capital Region through targeted marketing campaigns.

TECHNICAL SKILLS

Languages: Python, C, C++, Java, HTML/CSS, Javascript, PHP, Postgres/MySQL

Frameworks and Libraries: React, React-Native, Next.js, OpenCV, REST API

Tools: Github, Microsoft Azure, Jupyter Notebook, Figma, Excel
